Professional Experience

Software Engineer *Jul 2025 – Present*

Adyen, US

- Designed and implemented scalable **Ruby APIs** for a financial transaction platform, processing 100M daily requests, enhancing system resilience and security by 30% through robust error handling.
- Led development of **Java** microservices using **Spring Boot** on **AWS EKS**, significantly improving payment processing throughput by 40% and reducing average transaction latency to under 50ms.
- Engineered critical **Go software infrastructure** components for real-time data ingestion using **Kafka**, achieving 99.99% uptime and processing millions of events per second with optimized resource utilization.
- Implemented advanced **Python** scripts for automating **AWS cloud infrastructure** provisioning with **Terraform**, decreasing deployment times by 60% and ensuring consistent, secure environments for development.
- Mentored junior engineers on best practices for **distributed backend applications** and **design patterns**, fostering team growth and improving code quality across the engineering department by 25%.
- Optimized database performance for **PostgreSQL** and **Redis** through schema refactoring and query tuning, leading to a 35% reduction in query execution time and improved data retrieval speed.
- Established new **CI/CD** pipelines using **Jenkins**, **Git**, and **Docker** for multi-service deployments, improving release frequency by 50% and reducing manual errors by 70% company-wide.

Software Engineer *Jul 2024 – Jun 2025*

Plaid, US

- Developed high-performance **Python APIs** using **Django REST Framework** for customer data management, supporting 500,000 active users and ensuring data consistency with 99.9% accuracy.
- Built and maintained robust **Java services** with **Spring Boot** on **AWS EC2** for billing and subscription processing, increasing system reliability by 20% and reducing processing errors.
- Implemented secure data storage solutions on **AWS S3** and **RDS (PostgreSQL)** for sensitive client information, adhering to compliance standards and enhancing data security posture by 40%.
- Designed and deployed a **Go** microservice for real-time user activity tracking, utilizing **Kafka** and **Elasticsearch** to process 1M events/minute, providing immediate analytics updates.
- Enhanced existing **software infrastructure** by integrating **Docker** containers for application isolation, reducing environment setup time by 75% and improving deployment consistency across teams.
- Conducted comprehensive **testing** and **validation procedures** for new features using **JUnit** and **Pytest**, identifying and resolving 150+ critical bugs before production deployment, improving software quality.
- Optimized **low latency systems** by refining data access patterns and implementing caching with **Redis**, decreasing API response times by 30% for high-volume transactions, enhancing user experience.
- Debugged complex **production issues across services** and **multiple levels of the stack**, collaborating with cross-functional teams to diagnose root causes and implementing permanent solutions, reducing downtime.

Software Engineer *Jul 2021 – Aug 2022*

Expedia, IN

- Developed and maintained core **Java APIs** for a legacy system modernization project, enabling seamless data migration and improving system integration capabilities for enterprise clients.
- Contributed to backend development of a customer portal using **Python** and **Flask**, implementing user authentication and data retrieval, supporting 10,000 daily active users with consistent performance.
- Assisted in building scalable **software infrastructure** by configuring **AWS EC2** instances and **S3** buckets, ensuring robust storage and compute resources for various client applications.
- Wrote clear technical **documentation** for API endpoints and system architecture using **Swagger**, facilitating smoother onboarding for new developers and reducing integration time by 20%.
- Participated in **software requirements** gathering and **user needs analysis** sessions, translating business objectives into technical specifications for new features, improving project alignment by 15%.
- Implemented unit and integration **testing** using **JUnit** for critical application modules, increasing code coverage by 25% and reducing post-deployment defects by over 10% consistently.

Skills

Languages: Python, Java, Go, Ruby
Frameworks & Tools: Spring Boot, Django REST Framework, Flask, REST APIs, Docker, Kubernetes, Jenkins, Git, Kafka, Elasticsearch, Terraform, Swagger, JUnit, Pytest
Cloud & Infra: AWS (EC2, S3, RDS, EKS), CI/CD, Terraform
Databases & Search: PostgreSQL, Redis, Elasticsearch
Concepts: Microservices, Distributed Systems, System Design, Design Patterns, Low Latency, Scalability, Security

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
