Neel Gali

neellohit69@gmail.com

Summary

Experienced Software Developer with 4+ Years of Expertise in Full-Stack Development Across Biotech, Ag Tech, and Education Tech. Proficient in Building Large-Scale Web Applications Using Java, Angular, Spring Boot, and React. Demonstrated Ability to Automate Processes, Integrate Data, and Leverage AWS for Scalability and Performance Optimization. Adept at Developing Python/Django Applications, Crafting Efficient MySQL Databases, and Ensuring Cross-Browser Compatibility. Strong Troubleshooting Skills and a Commitment to Staying Ahead with Emerging Technologies. Seeking to Apply Technical Expertise and Innovative Solutions in a Dynamic Role.

Skills

Programming Languages: Java, Ruby, Python, C#, C++, SQL
Databases: MySQL, MongoDB, PostgreSQL, Oracle
Web Technologies: HTML, CSS, JavaScript, jQuery, XML, AJAX, JSON, Bootstrap, Restful API, Redux
Frameworks: Spring Boot, React.js, Node.js, Hibernate, Express.js, Spring Beans, Spring Security, Angular, .NET Core, ASP.NET Core, Django, Vue.js, NextJS, JQuery
Cloud Technologies: AWS (S3, EC2, RDS, Lambda, RedShift, EKS, ECS, Cloud Watch), Azure AD
Tools and Methodologies: Docker, Kubernetes, Jenkins, Groovy, Splunk, Grafana, Dynatrace, Kafka, RabbitMQ, Git, Jira, GitHub, Selenium, Postman, Maven, TDD, SDLC, Agile, Scrum, Kanban
Operating Systems: Linux, Unix, Windows, macOS

Experience

Full Stack Developer, Oklahoma State University – Stillwater, OK Aug 2023 – May 2024

- Assisted in implementing large-scale web applications using Java for backend technology and Angular for frontend, ensuring consistent experience and performance across 10+ devices and browsers
- Developed and utilized RESTful APIs with Express.js, enabling effective and secure synchronization between frontend and backend, enhancing overall application performance
- Leveraged Spring Beans for dependency injection and Spring Security for robust access control and authentication solutions, addressing security considerations effectively
- Managed and maintained Oracle databases, coordinating and optimizing large volumes of queries, indexes, and data processing for availability, consistency, and efficient retrieval
- Resolved deployment-related issues by using Splunk, Dynatrace, and Grafana to monitor applications

Software Developer Intern, Monarch Tractor – Livermore, CA Jun 2023 – Aug 2023

- Implemented an Automated Employee Management System for an Ag Tech Startup, decreasing HR manual tasks by 40% and saving roughly 150 Hours per month as an independent intern
- Integrated Microsoft Excel, Power BI, and Access with Python and SQL to consolidate and analyze large employee datasets from various databases into a centralized dashboard that provided real-time insights
- Empowered a Cost-Effective Solution by contributing to Requirement Analysis and Technical Feasibility Assessments of vendor proposals
- Utilized AWS S3 for efficient data storage and retrieval, ensuring high performance and scalability by optimizing data management strategies for large datasets
- Streamlined data exchange across UKG, JumpCloud, and Azure AD APIs for user management, device provisioning, user group administration, licensing, and cron job execution using Python scripts and serverless AWS services
- Utilized AWS services such as Lambda for serverless computing, RedShift for data warehousing, EKS for Kubernetes orchestration, and ECS for container management, significantly enhancing application scalability and performance

Full Stack Developer, ZeMoSo Technologies – Hyderabad, India Jul 2020 – Aug 2022

- Developed and Optimized UI Components, Refactored Microservices, and Built Comprehensive Test Cases for a Biotech Startup, Collaborating with Cross-Functional Teams Using React.js and Ruby on Rails
- Developed RESTful APIs in Ruby on Rails, utilizing Rails' routing system for endpoint definitions, JSON serialization for data exchange, and API versioning to maintain backward compatibility as the API evolved
- Developed and integrated new features for user roles and permissions management, using custom Pundit policy scopes to filter data based on user roles and enforcing role-based access control (RBAC)
- Enhanced user interface elements by integrating a new UI components into the custom library, replacing 10+ legacy implementations to drive design consistency and improve user experience
- Resolved issues with non-persisting data in edit forms by ensuring backend updates, maintaining UI consistency, and adding comprehensive tests, which improved the reliability of data operations
- Developed backend services using Java and Spring Boot, ensuring scalability and modularity in data processing for the platform
- Implemented database schemas in PostgreSQL, crafting efficient SQL queries to analyze data and ensuring data consistency across the platform
- Utilized AWS components such as S3 for data storage, EC2 for computational power, and RDS for managed database services, achieving high availability and efficient processing for the website handling 100+ transactions daily
- Adopted Agile development frameworks with active involvement in sprint planning, daily scrums, and retrospective meetings, enhancing iterative software development and efficient project milestone delivery
- Employed GitHub for version control, managing code repositories, creating feature branches, and collaborating with team members through pull requests and code reviews, ensuring high code quality
- Executed unit tests on calculation modules using JUnit and RSpec to minimize bugs and improve platform stability
- Employed Maven for build automation and dependency management, and adhered to Test-Driven Development (TDD) practices for robust code quality, comprehensive testing, and continuous integration, reducing build errors by 30 instances

Web Developer, Espire – Hyderabad, India Jul 2019 – Jun 2020

- Developed and maintained high-quality web applications using Python and Django and .NET to address challenges in the E-Commerce Platform Modernization project
- Engineered database structures according to MySQL specifications, created and optimized SQL queries, and fine-tuned databases for highly-loaded e-commerce applications
- Crafted efficient and accessible front-end applications in HTML, CSS, and JavaScript, adhering to the latest trends and standards of web design to ensure compatibility across 5+ major internet browsers on the e-commerce site
- Integrated .NET Core services with existing Python/Django applications to enhance system performance and support multi-platform development
- Developed RESTful APIs in ASP.NET Core, enabling secure and efficient data exchange between various components of the e-commerce platform
- Adopted Agile methods and modeled SDLC standards by attending sprint planning meetings, daily scrum, and sprint retrospective meetings to ensure timely delivery of features for the E-Commerce Platform Modernization project
- Utilized Git for version control, tracking repositories, creating new feature branches, sharing work with team members through branches and pull requests, and integrating new features through code reviews
- Executed considerable validation and verification of the e-commerce platform, scrutinized and fixed 20+ software faults, and practiced modern testing techniques to sustain superior code quality and dependability

Education

Oklahoma State University – MS in Computer Science May 2024

- Completed coursework in Explainable AI, mastering techniques like LIME and SHAP for model interpretability and exploring advanced topics like uncertainty estimation and causal inference in GNNs
