Neel Gali

AI/ML Engineer
neelgali7@gmail.com | +1(475)-291-1455

Summary

- AI/ML Engineer with 3+ years of experience specializing in building and deploying **autonomous AI agents**, internal AI tooling and ML Models at the intersection of **infrastructure telemetry, compliance and autonomous vehicles**
- Hands-on experience designing LLM-powered agents, **AI-assisted analysis and compliance workflows**, **MCP-based tool calling and n8n-orchestrated agents**, data processing and security controls across **AWS, Azure, and enterprise environments**
- Proven ability to design **modular Claude Skills** and create clean abstractions for non-technical users to compose useful workflows without writing code. Expert in **prompt engineering, context management**, and structured outputs, handle complex tasks like research, data enrichment, and proposal generation
- Proven ability to transition proof-of-concepts into governed, **production-ready workflows** using real-time inference pipelines and **cloud-native infrastructure**
- Experienced in **real-time inference ML pipelines** built with **Python, PyTorch/TensorFlow, OpenCV** and **CLI-based deployments**
- Strong background in **cloud deployment, CI/CD, SQL, DevOps tooling, and applied ML** for infrastructure and large-scale systems

Skills

AI & Agentic Systems: LLMs (OpenAI, Anthropic), Frameworks (LangChain, LlamaIndex, Hugging Face, BedRock), Prompt Engineering, Tool-Calling Agents, RAG, Vector Search, n8n
Languages & Libraries: Python, SQL, TensorFlow, OpenCV, PyTorch, YOLOv8, Detectron2 (Mask R-CNN), scikit-learn
Machine Learning: supervised & unsupervised learning, classification, regression, clustering, model validation, Image Augmentation.
Databases & Data Management: MySQL, PostgreSQL, MongoDB, DynamoDB
Scripting & Automation: PowerShell, Python, Bash, Power Automate
Cloud Platforms & Services: AWS, Azure, GCP (Cloud Functions)
CI/CD & DevOps: Jenkins, GitHub Actions, Azure DevOps, Docker, Kubernetes, Terraform, Apache Kafka

Professional Experience

Epik Solutions *Jun 2025 – Present*
AI / ML Engineer
Cybersecurity & Threat Intelligence

- Developed and deployed **autonomous AI agents using Python** and **modern LLM APIs** to analyze **high-volume telemetry event data** and **cybersecurity datasets**, proactively identifying emerging threats, reduced incident response time by 30% for internal security teams, significantly enhancing threat intelligence capabilities
- **Translated business and operational requirements** into model objectives, evaluation metrics, and deployment strategies by working closely with **security, infrastructure, and analytics stakeholders**
- Designed and implemented **modular Claude Skills** to connect to core internal systems (e.g., threat intelligence platforms, incident management) by creating clean abstractions, enabling non-technical users to compose **complex cybersecurity workflows** without writing code

- Applied advanced **prompt engineering** and context management techniques to **fine-tune AI agent behavior** for critical security tasks, resulting in a 15% reduction in false positives
- Developed **ML models using Python** to analyze **high-volume telemetry event data** and **cybersecurity datasets** used by internal security teams in production workflows.
- Built **automation scripts using Bash and PowerShell** to support CLI-based deployments, monitoring, and operational troubleshooting
- Supported **cloud-based production deployments** by validating application behavior, monitoring early usage signals and addressing issues discovered after release

Samay Systems LLC *July 2024 – Jun 2025*
AI / ML Engineer
Cloud & Compliance

- Designed and shipped **multiple autonomous AI agents** using the **n8n workflow automation** platform to operate independently across **compliance, audit, and risk analysis use cases**, handling research and data enrichment without human intervention.
- Built **Python services** that collect, validate, and summarize evidence data from **AWS, Azure, GitHub, and Jira and several other MCP-enabled APIs**, creating consistent inputs for downstream ML workflows
- Built **AI-assisted compliance workflows** combining LLM reasoning with structured enterprise data using **MCP-based tool calling and n8n-orchestrated agents**
- Implemented **RAG-style querying** over **historical compliance data** using **vector databases**, allowing customers to ask **natural-language questions** and receive contextual answers.
- Designed **complex relational schemas and SQL workflows** to support **multi-tenant**, multi-framework **compliance validation** at scale.
- **Deployed** services using **AWS cloud-native infrastructure, Docker, Kubernetes, and CI/CD pipelines**, ensuring reliability across multiple **production environments**

Monarch Tractor *Jun 2023 – Aug 2023*
ML Intern
Autonomous Vehicles

- Supported development of **computer-vision and ML pipelines** for **semi-autonomous agricultural vehicles** operating in **real-world environments**.
- Built **Python-based** preprocessing pipelines to **transform raw sensor and image data** into training-ready datasets for **detection and prediction tasks**.
- Built **object detection and segmentation models** using **PyTorch, TensorFlow, and OpenCV** to support **perception** and prediction use cases, validating outputs against operational constraints for autonomous and **transport-related systems**.
- **Tested models using CLI-driven workflows**, gaining hands-on experience with **operational ML systems**.
- Collaborated closely with engineers and stakeholders to **refine requirements** and **validate model outputs against field expectations** for production deployments.
- Deployed models to cloud-hosted production environments, gaining hands-on experience with performance monitoring and inference validation.

ZeMoSo Technologies *Jul 2021 – Aug 2022*
Associate Data Scientist
LabOps Automation

- Contributed to a **cloud-based scientific operations platform** designed to trace experiments, samples, and data from project inception to analysis.
- Built backend services and **ML-adjacent pipelines** that validated, enriched, and structured **experimental data**, enabling reliable downstream modeling and decision-making.

- Supported **Proof-of-Concept ML experimentation workflows** by automating dataset preparation, feature generation, and **experiment tracking**.
- Integrated **CI/CD pipelines** to validate models, enforce quality checks, and promote artifacts while maintaining auditability and security controls aligned with governance standards.

Education

Master's in Computer Science, Oklahoma State University
Bachelor's in Computer Science, JNTUH
