Skills

Languages: Python, Ruby, Java, JavaScript, SQL
Frameworks: React, Ruby on Rails, SpringBoot
Cloud: AWS, GCP, Azure
Tools: Docker, Kubernetes, Jenkins, Git, Jira
Methodologies and Practices: Agile, SDLC, MVC, REST, Maven, TDD, UML

Experience

Full Stack Developer, Grad School – Southeast US Aug 2023 – May 2024

- Enhanced UI responsiveness, decreasing initial page load times by around 30% by implementing lazy loading techniques for image-heavy content
- Optimized database queries, improving data retrieval speeds by 15% by adding indexes to frequently queried fields, and refining pagination logic
- Reduced performance bottlenecks by 20% by refactoring APIs into fewer efficient endpoints
- Resolved deployment-related issues promptly, by using logging and monitoring tools to detect and address potential issues

Software Developer Intern, Company – California Jun 2023 – Aug 2023

- Designed an employee lifecycle management workflow that reduces manual workload by 50% through automation and scripting as an independent intern
- Empowered a cost-effective solution, saving at least 30% of the budget, through contributions during requirement analysis and technical feasibility assessments of vendor proposals
- Streamlined data exchange across APIs for user management, device provisioning, user group administration, licensing, cron job execution using Python scripts and serverless AWS services
- Implemented an end-to-end solution that increased workflow efficiency by 60%, operating autonomously and responding to real-time changes periodically with minimal maintenance overhead

Full Stack Developer, Company – India Aug 2021 – Aug 2022

- Created UI components, refactored APIs, and built test cases for a scientific experiment tracking platform in a service-based startup, working with cross functional teams in React and Ruby on Rails
- Improved user interface elements, driving a 10% improvement in design consistency by integrating a new UI component into the custom library and replacing subsequent legacy implementations
- Developed and integrated new features for user roles and permissions management
- Resolved issues with non-persisting data in edit forms, reducing error reports by 5% by ensuring backend updates, maintaining UI consistency, and adding tests
- Contributed to CI/CD pipeline setup and maintenance for continuous delivery of software updates
- Conducted regular stand-ups and code reviews for a cohort of interns as a part of organizational responsibilities

Projects

Virtual Incubation Centre github.com/name/project

- Implemented a collaborative platform facilitating project registration, funding, mentorship, and management for users, investors, mentors, and administrators using Spring Boot, HTML, CSS

Rails Alpha Blog project.com

- Created a blogging platform allowing users to create, edit, and manage blog posts, utilizing Ruby on Rails and following MVC architecture
- Implemented user authentication, a robust routing system to handle various URL mappings and actions and active record for database management

Education

School – MS in Computer Science May 2024
School – BS in Computer Science Jul 2021
