Lohit Gali

Senior Software Engineer

lohitgali@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Ambitious, product-focused Senior Software Engineer with 5+ years of commercial experience specializing in Greenfield Innovation and product ownership across the Modern Stack. Expert in Node.js and TypeScript development for backend services and SvelteKit for frontend, with a strong background in GCP hosting. Eager to architect and deliver entire services, leveraging AI tools in daily workflow to drive AI-assisted engineering within a fast-paced scale-up environment.

TECHNICAL SKILLS

Programming Languages: Node.js, TypeScript, Python, JavaScript, SQL

Frameworks & Libraries: SvelteKit, Express.js, React, Next.js, LangChain

Cloud Platforms: GCP, AWS, Azure, Docker, Kubernetes

Databases: PostgreSQL, MongoDB, MySQL, DynamoDB

Tools & Methodologies: Git, CI/CD, GitHub Actions, Terraform, Agile, Microservices

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Epik Solutions

Jul 2025 - Present

• Led Greenfield Innovation initiatives to architect and deliver entire services for a new financial reporting platform, utilizing Node.js and TypeScript on GCP; achieved a 30% reduction in development cycles and 25% cost savings by optimizing cloud resource utilization, demonstrating strong product ownership for executive stakeholders.

• Implemented advanced AI-assisted engineering workflows leveraging AI tools in daily workflow to automate code generation and testing for large sections of the platform; improved developer efficiency by 40% and reduced critical bug rates by 15% for the engineering team, contributing to a fast-paced scale-up environment.

• Designed and developed highly scalable backend APIs with Node.js and TypeScript for critical asset reporting, integrating with SvelteKit for dynamic frontend experiences; supported 1M+ daily data transactions with 99.9% uptime, ensuring reliable data delivery for financial analysts and compliance teams.

• Championed a flat structure approach, actively contributing to Influence the Roadmap discussions and technical design for core platform features; fostered a culture of shared product ownership and technical excellence, leading to the successful launch of three major product features ahead of schedule.

Software Engineer (Platform & Compliance) | Samay Systems LLC

Jul 2024 - Jun 2025

• Developed and deployed robust backend services using Node.js and TypeScript on GCP for a SaaS compliance platform, ensuring secure data handling and API integrations; achieved 99.99% data integrity and enabled seamless audit evidence collection from diverse cloud environments for customer compliance teams.

• Engineered scalable data processing pipelines to support AI-assisted engineering within compliance workflows, utilizing Python and cloud functions on GCP; accelerated evidence validation time by 35% for customers, directly supporting their AI-Fluent audit processes.

• Collaborated with product managers and security experts to implement comprehensive security features and access controls across the platform; enhanced system resilience and compliance posture, reducing potential security vulnerabilities by 20% year-over-year for enterprise clients.

Enterprise Software Engineer | Arvam Tech

Jul 2023 - May 2024

• Contributed to the development of enterprise asset management systems, focusing on backend API development and data integration using Node.js and TypeScript; streamlined asset data synchronization by 40%, enhancing data accuracy and operational efficiency for internal teams.

• Implemented event-driven microservices architecture to process streaming updates for asset data, ensuring

near real-time data availability for reporting and analytics; improved data freshness by 60%, providing critical insights for decision-makers in a fast-paced scale-up environment.

• Developed interactive dashboards and reporting features with React and integrated them with GCP services for data storage and processing; provided clear visibility into asset utilization patterns, empowering operations teams to optimize resource allocation and reduce idle assets by 15%.

Solutions Engineer | RHYM Tech

Aug 2022 - May 2023

• Designed and implemented data ingestion pipelines for high-volume telemetry data, utilizing Python and SQL to transform raw event data into structured formats; enabled downstream statistical analysis and pattern detection for cybersecurity threat intelligence, reducing data processing time by 25%.

• Developed analytical models for anomaly detection and trend analysis across security telemetry, integrating with backend systems; identified critical security threats 15% faster, enhancing the platform's ability to protect customer assets.

• Created custom dashboards and visualizations using React and data visualization libraries, effectively communicating complex security insights to technical and non-technical stakeholders; improved stakeholder understanding of risk indicators by 30%, fostering proactive security measures.

Associate Software Developer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Contributed to the development of modern web application features for biotech lab automation using JavaScript, React, and HTML/CSS; improved user interface responsiveness by 20% and enhanced overall user experience for lab technicians.

• Implemented and maintained backend APIs using Node.js to support UI-driven workflows, ensuring data integrity and efficient communication between frontend and database; successfully handled 10,000+ daily API requests with minimal latency, supporting critical lab operations.

• Assisted in data preparation and exploratory analysis for data science initiatives, utilizing Python scripts to clean and transform datasets; streamlined data availability for model training by 15%, accelerating insights generation for research scientists.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
