Lohit Gali

DevOps Security Engineer

lohitgali@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

DevOps Security Engineer with 5+ years of experience specializing in public cloud infrastructure security within AWS. Proven expertise in deploying and customizing security tools including vulnerability scanners, SIEM, and endpoint security monitoring. Skilled in implementing encryption protocols, secret management, and automated security testing within CI/CD pipelines, utilizing Kubernetes and Terraform infrastructure for secure deployments.

TECHNICAL SKILLS

Security Tools & Protocols: vulnerability scanners, static analysers, SIEM, IDS/IPS, WAF/firewalls, pen tests, endpoint security monitoring, encryption protocols, secret management, SSO technology, automated security testing

Cloud & DevOps Infrastructure: AWS, GCP security, Kubernetes, Terraform infrastructure, CI/CD pipelines, Docker, Jenkins, GitHub Actions, Azure DevOps

Programming & Scripting: Python, Go, Bash, PowerShell

Networking & Administration: Linux server administration, fundamentals of networking, TCP/IP, DNS, VPN

PROFESSIONAL EXPERIENCE

Senior DevOps Security Engineer | Epik Solutions

Jul 2025 - Present

• Designed and implemented robust automated security testing frameworks within CI/CD pipelines, leveraging vulnerability scanners and static analysers to detect critical security flaws early in development; reduced security vulnerabilities post-deployment by 40% for core applications.

• Engineered and managed public cloud infrastructure security solutions on AWS, deploying WAF/firewalls and IDS/IPS to protect sensitive data and applications; achieved 99.9% uptime and compliance with industry security standards.

• Developed and enforced comprehensive encryption protocols and secret management strategies across multiple environments using AWS KMS and HashiCorp Vault; mitigated data breach risks by securing sensitive credentials and communications.

• Administered and hardened Linux server administration practices for mission-critical systems, implementing secure configurations and regular patching to minimize attack surface; improved server security posture by 30%.

• Configured and maintained SIEM solutions to aggregate security logs and events, enabling real-time threat detection and incident response capabilities; reduced average incident response time by 25%.

• Led the integration of SSO technology for enterprise applications, streamlining user authentication and enhancing access control mechanisms; improved user experience and compliance across 500+ employees.

• Collaborated with development teams to embed security best practices throughout the SDLC, providing expertise on pen tests and endpoint security monitoring to proactively identify and resolve risks.

Cloud Security Automation Engineer | Samay Systems LLC

Jul 2024 - Jun 2025

• Automated the deployment and configuration of security tools like vulnerability scanners and endpoint security monitoring across AWS infrastructure using Python and Terraform infrastructure; decreased manual effort by 60%.

• Developed Python-based tools for secret management and rotation, integrating with CI/CD pipelines to ensure secure handling of API keys and credentials; prevented unauthorized access to critical systems.

• Implemented automated security testing checks within CI/CD pipelines for Kubernetes deployments, ensuring all container images met security baseline requirements; reduced critical image vulnerabilities by 35%.

• Contributed to the design and implementation of secure networking configurations, applying fundamentals of networking principles to isolate critical services; enhanced network security posture.

• Assisted in optimizing SIEM alert correlation rules, improving the accuracy of threat detection and reducing false positives; enabled faster response to genuine security incidents.

Enterprise Cloud Security Engineer | Arvam Tech

Jul 2023 - May 2024

• Administered Linux server administration tasks, focusing on security hardening and patch management for enterprise applications running on public cloud infrastructure; ensured compliance with internal security policies.

• Developed Go-based scripts to automate security compliance checks across cloud resources, identifying misconfigurations and reporting findings to security teams; improved audit readiness by 50%.

• Integrated WAF/firewalls into cloud deployments to protect web applications from common attacks, mitigating OWASP Top 10 risks; reduced critical web application incidents by 20%.

• Collaborated on implementing SSO technology for internal systems, improving user authentication security and simplifying access for 1000+ employees.

• Participated in pen tests and vulnerability assessments, reporting findings and working with engineering teams to remediate identified security gaps; strengthened overall system security.

• Managed secret management solutions for application credentials, ensuring secure storage and retrieval, reducing exposure to hardcoded secrets.

Associate Security Solutions Engineer | RHYM Tech

Aug 2022 - May 2023

• Supported the deployment and configuration of endpoint security monitoring solutions for client environments, ensuring comprehensive threat visibility; improved client security posture by detecting suspicious activities.

• Assisted in evaluating and integrating various security tools, including initial setup of vulnerability scanners, to identify potential weaknesses in network infrastructure.

• Contributed to the development of Python scripts for automating routine security tasks and data collection from security logs; enhanced operational efficiency.

• Learned and applied fundamentals of networking to troubleshoot security-related network issues and ensure secure communication channels.

• Supported Linux server administration for development and staging environments, focusing on basic security configurations and access control.

• Participated in discussions around encryption protocols for data in transit and at rest, gaining foundational knowledge in data protection.

Associate Cloud Developer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Developed and deployed backend APIs on public cloud infrastructure (AWS), implementing secure coding practices and basic authentication mechanisms; supported new features for biotech lab operations.

• Assisted in configuring cloud resources, applying basic security group rules and IAM policies to limit access; ensured adherence to least privilege principles.

• Implemented CI/CD pipelines for automated code deployments, gaining initial exposure to automated testing practices, including basic security checks.

• Collaborated with senior engineers to understand and apply best practices for cloud infrastructure and application security, setting a strong foundation for future roles.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
