Neel Gali

Software Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX | linkedin.com/in/neelgali

Skills

Languages: Python, TypeScript, JavaScript, SQL, Go, Java, Bash, PowerShell
DevSecOps: Secure Development Lifecycle, Secrets Management, Credential Scanning, SAST/DAST
Security Platforms: CI/CD Security Gates, Policy-as-Code, RBAC, SSO/SAML, OAuth2/OIDC, API Integrations
AI Security: LLMs, Agentic Workflows, Agent Loops, Spec/Loop Driven Development, RAG, Evals
Cloud/Infra: Kubernetes, KOB, Docker, Linux, Windows Server, AWS, Azure, Terraform
Engineering: REST APIs, GraphQL, Microservices, GitHub Actions, Jenkins, Observability, Jira, Agile

Professional Experience

Software Engineer AI *Jun 2025 - Present*

Epik Solutions | Enterprise Security & DevSecOps Platform

- Built **Python, TypeScript, and Go microservices** for enterprise security telemetry, integrating security products into CI/CD workflows used by application and platform engineering teams.
- Implemented **Secure Development Lifecycle controls** including secrets detection, credential validation, SAST/DAST findings intake, vulnerability triage, and remediation workflow automation.
- Integrated **security tools into DevOps pipelines** with GitHub Actions, Jenkins, REST APIs, webhooks, and policy checks, reducing manual security review effort by **40%**.
- Developed **AI-assisted security scanning workflows** using LLMs, RAG, prompt regression tests, and human approval queues to review model outputs, application findings, and remediation suggestions.
- Built enterprise identity and access integrations with **SSO/SAML, OAuth2/OIDC, RBAC**, service credentials, and secret rotation patterns across internal security services.
- Deployed and supported services on **Kubernetes, Docker, Linux, Windows Server, AWS, Azure**, and Terraform-managed environments with observability through Prometheus, Grafana, and CloudWatch.
- Worked with architects, vendors, DevOps teams, and application owners to refine backlog priorities, evaluate security products, document integration behavior, and unblock adoption across engineering groups.

Founding Engineer (Full Stack AI) *Jul 2024 - Jun 2025*

Samay Systems LLC | B2B SaaS Compliance AI Platform

- Designed a **multi-tenant AI compliance platform** on AWS using Python, TypeScript, GraphQL, Lambda, ECS, SQS, PostgreSQL, and Neo4j for **15+ enterprise clients**.
- Built **DevSecOps automation** for evidence collection, cloud control validation, audit trails, secure configuration checks, and vulnerability remediation reporting across enterprise systems.
- Productionized **agentic AI workflows** with AWS Bedrock, Azure OpenAI, LangChain, RAG, tool-calling agents, and eval datasets, reducing manual evidence review by **70%**.
- Implemented tenant isolation, **RBAC**, secret handling, environment promotion, and CI/CD quality gates to support secure releases across dev, staging, and production.
- Developed **REST and GraphQL APIs** that connected compliance workflows with Jira, GitHub, cloud accounts, document stores, and identity systems for audit-ready enterprise integrations.
- Partnered with customer stakeholders, platform engineers, and security teams to translate ambiguous compliance/security requirements into backlog items, roadmap tradeoffs, and production-ready features.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*

Monarch Tractor | Autonomous Systems & Identity Automation

- Built **Python telemetry pipelines** for image, sensor, and operational datasets used in ML workflows, converting raw field data into validated artifacts for downstream analysis.
- Developed identity lifecycle automation across UKG, JumpCloud, and Azure AD/Entra-style systems, reducing provisioning time by **80%** through API integrations and validation scripts.

Software Engineer *Jul 2020 - Aug 2022*

ZeMoSo Technologies | LabOps / Scientific Workflow Platform

- Delivered full-stack workflow modules using React, TypeScript, Java Spring Boot, Ruby on Rails, and PostgreSQL for a regulated LabOps platform used by **500+ scientists**.
- Built **REST APIs**, role-based access workflows, audit logs, data validation, and release checks across **10+ product modules** including inventory, sample lineage, and file uploads.
- Authored **100+ automated tests**, debugged production defects on Linux-hosted services, and integrated Jenkins CI/CD gates to improve release quality for regulated workflows.
- Documented API behavior, troubleshooting steps, deployment notes, and validation paths for QA, infrastructure, and product teams in an Agile delivery environment.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
