Neel Gali

Software Engineer – Platform & Ecosystems
neelgali7@gmail.com | +1 (475)-291-1455 | Remote (US)

Summary

Software Engineer with 5+ years of experience building **scalable backend and full-stack systems** that enable extensibility, developer platforms, and third-party integrations. Strong background in **distributed systems, API-driven architectures, and 0→1 product development**, with end-to-end ownership from design through deployment. Proven collaborator across product, platform, and partner teams, with a strong bias for quality, velocity, and maintainable abstractions.

Technical Skills

Languages & Frameworks: Java, Node.js, JavaScript/TypeScript, React
Backend Systems: REST APIs, service-oriented & microservices architecture, middleware
Frontend: ReactJS, developer-facing UI components
Distributed Systems: scalable backend services, async workflows, reliability patterns
Ecosystem & APIs: extensibility frameworks, third-party integrations, platform APIs
Engineering Practices: technical design docs, code reviews, CI/CD, testing
Cloud & Ops: cloud-native services, deployments, monitoring, performance tuning

---

Professional Experience

Epik Solutions — *Jul 2025 – Present*

Senior Software Engineer (Platform & Extensibility Systems)

- Designed and built **backend platform services** that enabled internal and external teams to extend core product functionality through well-defined APIs, supporting rapid feature expansion without coupling.
- Implemented **scalable NodeJS and Java-based services** to handle high-throughput requests, ensuring reliability and performance for large developer and user populations.
- Owned features **end to end**—from technical design and implementation through deployment and production support—maintaining a high quality bar.
- Collaborated with product managers, designers, and partner-facing teams to translate ambiguous requirements into **clear technical specifications** and extensible system designs.
- Reviewed architecture proposals and code changes from peers, improving consistency, security, and maintainability across the platform.
- Incrementally improved system performance and developer experience through focused refactors and disciplined pull requests.

Samay Systems LLC — *Feb 2025 – Jun 2025*

Senior Software Engineer (Developer Platform & Integrations)

- Built **platform capabilities** that allowed third-party systems to integrate safely and reliably with core services via authenticated APIs.
- Designed **middleware services** to manage request validation, authorization, and versioned contracts, enabling safe extensibility at scale.
- Created backend abstractions that allowed new integrations to be added with minimal impact on existing systems, supporting 0→1 platform growth.
- Authored and reviewed **technical design documents** to align cross-functional teams on system behavior and tradeoffs.
- Worked closely with senior engineers to evolve platform architecture while maintaining delivery velocity.

Arvam Tech — *Jul 2023 – Jan 2025*

Software Engineer (Full-Stack Systems)

- Developed **backend services and APIs** supporting complex workflows used by multiple internal teams and external consumers.
- Built **React-based interfaces** to expose platform capabilities and configuration options to developers and operators.
- Implemented scalable data access and request handling patterns to ensure consistent performance under growth.
- Participated in system design discussions focused on **scalability, fault isolation, and long-term extensibility**.
- Supported deployments and production troubleshooting, improving system reliability through better observability.

RHYM Tech — *Aug 2022 – May 2023*

Software Engineer (Backend & Platform Foundations)

- Built backend services that supported **integration-heavy workflows** across multiple systems.
- Implemented API endpoints and business logic in a distributed environment with attention to correctness and latency.
- Assisted in debugging production issues by analyzing logs, traces, and system behavior.

ZeMoSo Technologies — *Jul 2021 – Aug 2022*

Associate Software Engineer

- Developed backend and frontend components using Java, JavaScript, and web frameworks.
- Built REST APIs and UI features aligned with evolving product requirements.
- Gained hands-on experience with **end-to-end software delivery**, testing, and deployments.

Education

Master's in Computer Science — Oklahoma State University
Bachelor's in Computer Science — JNTU Hyderabad
