Lohit Gali

Platform Engineer

lohitgali@gmail.com | +14752911455 | Stillwater, OK

PROFESSIONAL SUMMARY

Platform Engineer with 3+ years of experience designing and implementing self-service workflows and robust CI/CD pipelines to create a useful and intuitive environment for diverse engineering teams. Expert in TypeScript, Node.js, Kubernetes, AWS, and Terraform, focusing on developer experience, automation, and security best practices to ensure high availability and performance in dynamic cloud environments.

TECHNICAL SKILLS

Programming Languages: TypeScript, Node.js, Python, Golang, Bash

Cloud & DevOps: AWS, Kubernetes, Terraform, Docker, Git, CI/CD Pipelines, GitHub Actions, Jenkins, Azure DevOps

Platform & Orchestration: Backstage, Temporal, APIs, GraphQL, Webhooks, Service Catalogs, Self-Service Workflows

Observability & Security: Grafana, Prometheus, OpenTelemetry, OAuth, RBAC, Security Best Practices

Databases & Tools: PostgreSQL, MongoDB, DynamoDB, MySQL, Jira

PROFESSIONAL EXPERIENCE

Platform Engineer | Epik Solutions

Jun 2025 - Present

• Led the design and implementation of a self-service workflow platform using TypeScript and Node.js, simplifying complex processes for engineering teams and reducing onboarding time by 30%.

• Orchestrated seamless integration of CI/CD pipelines with internal tools and service catalogs, enhancing developer productivity and enabling rapid feature deployment across diverse engineering teams.

• Developed and maintained cloud-native infrastructure on AWS using Terraform and Kubernetes, ensuring high availability and performance for critical services.

• Implemented robust observability tools including Grafana and Prometheus to proactively monitor system health and application performance, reducing incident resolution time by 25%.

• Established and enforced security best practices, integrating OAuth and RBAC for secure access control across platform services, achieving 99.9% compliance with internal security audits.

• Contributed to open-source initiatives and internal knowledge sharing, fostering a culture of collaboration and continuously improving the developer experience.

Cloud & Infrastructure Engineer | Samay Systems LLC

Jul 2024 - Jun 2025

• Engineered cloud-native services using Python and AWS to automate data collection and validation from multiple sources, improving data reliability for downstream compliance workflows by 40%.

• Designed and deployed Dockerized applications on Kubernetes clusters using CI/CD pipelines, increasing deployment frequency by 50% for critical infrastructure components.

• Integrated internal tools with various APIs and webhooks to streamline evidence gathering for compliance audits, reducing manual effort by 20 hours per week for audit teams.

• Managed infrastructure as code with Terraform, maintaining consistent and reproducible environments across development, staging, and production on AWS and Azure.

• Implemented monitoring solutions with OpenTelemetry and integrated alerts into existing observability stacks, proactively identifying and resolving potential system bottlenecks.

• Collaborated with security teams to embed RBAC and OAuth configurations into cloud services, strengthening security posture and ensuring adherence to compliance standards.

DevOps Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Automated deployment processes for ML models to cloud-hosted production environments using Docker and Jenkins, reducing manual deployment errors by 70%.

• Assisted in managing Kubernetes clusters for scalable application deployment, gaining hands-on experience with container orchestration for autonomous vehicle systems.

• Developed Bash scripts to streamline data preprocessing pipelines, improving data readiness for various engineering teams and accelerating development cycles.

• Supported the integration of new sensor data streams into the existing infrastructure, ensuring a smooth integration with infrastructure and maintaining data integrity.

• Contributed to documentation for CI/CD pipelines and deployment best practices, enhancing internal knowledge transfer and improving developer experience.

• Collaborated with software engineers to troubleshoot infrastructure issues in a dynamic cloud environment, contributing to maintaining high availability and performance.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Built backend services using Node.js and TypeScript for a cloud-based scientific operations platform, enhancing experiment traceability and data integrity for lab teams.

• Integrated CI/CD pipelines using GitHub Actions to automate testing and deployment of services, ensuring quality checks and faster release cycles.

• Supported the development of API endpoints and GraphQL interfaces for internal tools, facilitating seamless integration with various data sources and downstream analytics.

• Collaborated on designing database schemas and optimizing SQL queries for PostgreSQL, improving data retrieval efficiency by 35% for critical business intelligence reports.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
