Neel Gali

Compliance Automation Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Highly motivated Compliance Automation Engineer with 3+ years of experience in GRC, specializing in designing and automating control testing and evidence collection. Proven ability to build scripts and APIs across infrastructure, endpoints, and SaaS platforms (AWS, GitHub) to support internal and external audits (SOC 2, ISO 27001). Adept at leveraging AI/ML tools to improve efficiency and embed compliance checks into CI/CD pipelines, ensuring reliable control monitoring and managing enterprise risk.

TECHNICAL SKILLS

Automation & Scripting: Python, Bash, PowerShell, API Development, Command-Line Tools, Structured Data (JSON, CSV, YAML), SQL, Power Automate

GRC & Compliance Frameworks: SOC 2, ISO 27001, PCI DSS, FedRAMP, NIST 800-53, NIST 800-171, Audit Processes, Control Testing, Evidence Requirements, Remediation Actions, Data Governance

Cloud & DevOps: AWS, Azure, GitHub, Jenkins, Docker, Kubernetes, CI/CD Pipelines, Terraform, Infrastructure Deployment Workflows, Apache Kafka

Data Management: MySQL, PostgreSQL, MongoDB, DynamoDB, Data Deletion, Data Retention, Data Storage

GRC & Security Tools: Okta, Drata, Satori, Jira, Splunk

PROFESSIONAL EXPERIENCE

Compliance Automation Engineer | Epik Solutions

Jun 2025 - Present

• Designed and implemented automated control testing workflows using Python scripts and API integrations with security, IT, and GRC systems across infrastructure and SaaS platforms to reduce manual effort for recurring internal and external audits (SOC 2, ISO 27001); improved accuracy of evidence collection by 40% and accelerated audit readiness by 30%.

• Developed a suite of Python-based scripts and API end points to extract compliance-relevant information from AWS, GitHub, and internal security tools, centralizing data for reliable control monitoring; reduced data collection time by 50% and enhanced the global compliance posture.

• Spearheaded the integration of technical control requirements by embedding compliance checks directly into CI/CD pipelines and infrastructure deployment workflows using Terraform and GitHub Actions to ensure security requirements were met from development to production; decreased compliance violations post-deployment by 25% and strengthened enterprise risk management.

• Championed data governance strategies and processes by automating data deletion, data retention, and data storage policies via custom scripts and database integrations, ensuring adherence to evolving compliance requirements; achieved 99% compliance with data privacy regulations and minimized legal exposure.

• Leveraged AI/ML tools (e.g., anomaly detection libraries) to analyze large volumes of security telemetry and identify potential compliance gaps, improving efficiency and outcomes for GRC processes; proactively identified and remediated 15+ high-risk compliance exceptions, enhancing overall security posture.

• Collaborated cross-functionally with legal, engineering, and IT teams to define audit processes, evidence requirements, and remediation actions, supporting successful completion of annual SOC 2 and ISO 27001 certifications; ensured zero critical findings across multiple internal and external audits.

GRC Automation Engineer | Samay Systems LLC

July 2024 - Jun 2025

• Designed and implemented automated evidence collection solutions using Python scripts and API calls to integrate with AWS, Azure, GitHub, and Jira, standardizing inputs for GRC processes; reduced manual effort by 35% for quarterly compliance validations and audit processes.

• Developed command-line tools and API end points to facilitate extraction and transformation of structured data (JSON, CSV, YAML) from various cloud and enterprise systems, providing compliance-relevant information to

stakeholders; improved data accessibility by 60% for audit teams, accelerating response times during external audits.

• Collaborated on defining technical control requirements, working with development teams to embed compliance checks into CI/CD pipelines and infrastructure deployment workflows, ensuring adherence to security requirements from initial development stages; prevented an estimated 20+ potential compliance breaches annually, strengthening the global compliance posture.

• Implemented data governance principles by scripting automated solutions for data deletion, data retention, and data storage practices across multi-cloud environments to align with regulatory standards like PCI DSS and enhance managing enterprise risk; achieved 100% compliance with data lifecycle policies, minimizing legal and operational risks.

• Supported recurring internal and external audits by ensuring reliable control monitoring and providing comprehensive evidence requirements for SOC 2 and ISO 27001 to maintain continuous compliance posture; facilitated successful attainment of SOC 2 Type 2 certification within an aggressive timeline.

• Leveraged foundational AI/ML concepts to prototype automated risk assessment tools by analyzing compliance data patterns to improve efficiency and outcomes for GRC processes; identified potential areas for proactive remediation, enhancing the overall security posture.

ML Automation Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Developed Python-based preprocessing pipelines to transform raw sensor and image data into structured datasets (JSON, CSV) to support downstream ML tasks and ensure data integrity for internal systems; reduced data preparation time by 25% for subsequent analysis, improving project timelines.

• Wrote scripts to automate testing and validation of ML models, utilizing command-line tools and defined test cases against operational constraints to ensure model reliability and performance for autonomous systems; identified critical errors early, preventing 10+ potential deployment issues and enhancing system stability.

• Collaborated with engineering teams to refine technical requirements for data collection and processing, ensuring alignment with project objectives and operational expectations; improved data quality by 15% through feedback loops, contributing to more robust model training.

• Contributed to the deployment of models to cloud-hosted environments (AWS) by assisting with scripting for automated deployments and performance monitoring, gaining foundational experience with infrastructure deployment workflows; ensured consistent model behavior in production, supporting continuous operations.

• Practiced working with structured data by analyzing logs and performance metrics from ML systems using basic Python scripts to identify anomalies and inform iterative improvements; provided actionable insights that led to a 5% optimization in resource utilization.

• Assisted in defining clear audit processes for data labeling and model validation, documenting evidence requirements and data lineage to maintain data integrity and support future compliance needs; established early frameworks for data quality control, setting a baseline for future data governance.

Associate Data & Automation Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Built backend Python services and automation scripts to validate, enrich, and structure experimental data, enabling reliable downstream modeling and decision-making for scientific operations; reduced data inconsistency by 20%, significantly improving data quality for research teams.

• Supported Proof-of-Concept ML experimentation workflows by automating dataset preparation, feature generation, and experiment tracking using scripting to streamline the data science lifecycle and accelerate insights; increased experiment velocity by 15%, allowing for more rapid iteration on models.

• Integrated CI/CD pipelines to automate model validation, enforce quality checks, and promote artifacts while maintaining auditability and security controls aligned with governance standards; decreased deployment errors by 10% and ensured compliance with internal quality assurance protocols.

• Contributed to the design of relational schemas and SQL workflows to manage experimental data effectively, supporting data retention and data storage policies for the scientific platform; established a robust data foundation, ensuring long-term data accessibility and integrity for future audits.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
