Neel Gali

Backend Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX

Professional Experience

Software Engineer *Jun 2025 - Present*

Epik Solutions

- Designed and maintained scalable Golang microservices for a high-throughput enterprise search platform, applying event-driven patterns with Kafka that improved throughput by 35%.
- Built robust REST APIs backed by MongoDB with optimized data models and compound indexes, sustaining sub-50ms p95 read latency across 10M+ documents under concurrent production workloads.
- Instrumented distributed services with Prometheus and Grafana observability dashboards, enabling proactive performance profiling that reduced mean incident detection time by 40% across all services.
- Optimized Redis caching layers across hot read paths, designing cache invalidation strategies and TTL policies that reduced database load by 60% and cut API response times by 40%.
- Led system design discussions for microservices decomposition and Kubernetes deployment topology, owning architectural decisions that improved service reliability and eliminated single points of failure in production.

Backend Engineer *Jul 2024 - Jun 2025*

Samay Systems LLC

- Architected distributed backend microservices in Golang and Node.js for a multi-tenant platform serving 15+ enterprise clients, applying tenant isolation and circuit breaker patterns sustaining 99.9% uptime.
- Designed PostgreSQL and MongoDB data models for high read/write compliance workloads, optimizing indexes and query patterns to improve data retrieval performance by 45% across 10K+ records monthly.
- Built Kafka-based event-driven pipelines for real-time compliance data ingestion, decoupling producers and consumers across 5+ microservices and reducing end-to-end processing latency by 35%.
- Engineered Redis caching strategies for session management and hot query results across a high-concurrency search system, reducing MongoDB read load by 50% and sustaining sub-100ms
- Containerized all services with Docker and deployed on Kubernetes, configuring horizontal pod autoscaling and liveness probes that reduced deployment downtime by 40% across production.

SDE Intern *Jun 2023 - Aug 2023*

Monarch Tractor

- Built AWS Lambda data pipeline services with Python, designing scalable event-driven ingestion workflows that processed agricultural sensor data with 40% fewer pipeline failures across 3 prod envs.
- Developed data validation and transformation scripts enforcing schema consistency and reducing cross-system data integrity issues by 40% across 500+ employee workflows via GitHub-releases

Software Engineer *Jul 2021 - Aug 2022*

ZeMoSo Technologies

- Delivered 10+ backend services using Node.js REST APIs with PostgreSQL, designing relational data models and indexed query patterns that ensured data integrity for 500+ scientists
- Analysed and optimised slow PostgreSQL queries through execution plan profiling and index tuning, improving application response times by 35% and resolving critical production bottlenecks
- Authored 100+ integration and unit test cases, systematically diagnosed distributed service failures, and enforced code review standards that reduced production regression incidents by 40%.

Skills

Programming Languages: Golang, Python, TypeScript, JavaScript, Java, SQL, Bash
Back-End & APIs: Node.js, REST APIs, GraphQL, Express, Golang (Gin), Spring Boot
Databases & Data Modelling: MongoDB, PostgreSQL, MySQL, Redis, OpenSearch, Elasticsearch
Messaging & Caching: Kafka, Redis, AWS Kinesis, Event-Driven Architecture
Observability & Performance: Prometheus, Grafana, Query Profiling, Index Optimisation, Load Testing
Cloud & DevOps: AWS (Lambda, ECS, S3, RDS), Docker, Kubernetes, Terraform, GitHub Actions, CI/CD

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
