Lohit Gali

Senior Software Engineer, Product Metrics

lohitgali@gmail.com | +14752911455 | New York, NY

PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of experience in building and operating scalable, fault-tolerant, distributed systems. Specialized in designing high-performance product metrics platforms and business-critical petabyte-scale systems, leveraging Golang, AWS, and ClickHouse. Proven ability to drive the development of new features, ensuring optimal performance, reliability, availability, and cost-efficiency for critical data infrastructure.

TECHNICAL SKILLS

Programming Languages: Golang, Python, SQL

Cloud Platforms: AWS, Azure, GCP

Databases & Data Stores: ClickHouse, PostgreSQL, MongoDB, DynamoDB

DevOps & Orchestration: Kubernetes, Helm, ArgoCD, Temporal, Terraform, Docker

CI/CD & Monitoring: GitHub Actions, Azure DevOps, Jenkins, Grafana

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Product Metrics Platform | Epik Solutions

Jul 2025 - Present

• Designed and implemented core components for a petabyte-scale Product Metrics platform using Golang and ClickHouse, processing over 10TB of daily event data; improved data retrieval latency by 70% and reduced operational costs by 25%.

• Developed and deployed highly available, fault-tolerant microservices on Kubernetes using AWS, ensuring 99.99% uptime for business-critical reporting and analytics services; achieved zero downtime during critical data migrations.

• Led the iterative design and delivery of new features for real-time data ingestion and aggregation pipelines, collaborating with product owners to define requirements and validate MVPs; accelerated feature release cycles by 40% and improved data accuracy by 15%.

• Established robust monitoring, alerting, and on-call rotation protocols for the metrics platform, proactively identifying and resolving issues to maintain system reliability and availability; decreased incident resolution time by 30%.

• Utilized Terraform for infrastructure-as-code deployments across multiple AWS environments, standardizing setup and reducing manual configuration errors by 90%; enabled rapid provisioning of development and staging environments for scalable systems.

Senior Software Engineer, Cloud Platform Development | Samay Systems LLC

Jul 2024 - Jun 2025

• Engineered scalable, fault-tolerant distributed systems on Azure to process and store large volumes of compliance-related data, handling peaks of 1 million requests/minute; ensured data integrity and system resilience for critical compliance workflows.

• Developed and optimized software applications using Golang for backend services, integrating with various Azure services to deliver new features for a SaaS compliance platform; reduced processing time for compliance checks by 50%.

• Implemented CI/CD pipelines with Azure DevOps and ArgoCD for automated deployment of microservices to Kubernetes clusters, improving deployment frequency by 3x and reducing manual deployment errors by 80%.

• Contributed to the design and implementation of modular solutions and APIs for data access and transformation, enabling faster development of customer-facing features and improving data consistency across the platform.

• Participated in on-call rotation to provide production debugging and support for critical platform services, resolving complex issues under pressure and minimizing impact on customer operations, demonstrating a strong

problem-solving mindset.

Software Engineer, Enterprise Data Platforms | Arvam Tech

Jul 2023 - May 2024

• Designed and built data ingestion pipelines for enterprise asset management systems, processing large volumes of operational data into analytics-ready formats using Azure Data Factory and ADLS Gen2; improved data freshness for reporting by 60%.

• Developed backend services with Python to support data transformation and API endpoints, facilitating integration with Power BI dashboards and internal tools; enhanced data accessibility for 15+ internal business-critical teams.

• Implemented event-driven architectures to ensure near real-time updates for asset tracking and utilization metrics, reducing reporting delays by 75% and enabling proactive operational decision-making.

• Managed the deployment and scaling of data processing workloads on cloud infrastructure, contributing to the cost-efficiency and availability of critical data assets; optimized resource utilization, leading to a 15% reduction in cloud spend.

• Collaborated with cross-functional teams to gather requirements for new features and iteratively improve existing data solutions, ensuring alignment with customer needs and business objectives through short feedback loops.

Associate Software Engineer, Threat Intelligence Platform | RHYM Tech

Aug 2022 - May 2023

• Developed Python-based analytical models to process high-volume cybersecurity telemetry and event data, identifying emerging threats and anomalies; improved detection accuracy by 20% and supported threat intelligence efforts.

• Engineered data pipelines for ingesting diverse security event logs into structured databases, preparing data for downstream machine learning tasks and statistical analysis; streamlined data preparation workflows, reducing manual effort by 30%.

• Created interactive dashboards and visualizations to present complex security trends and risk indicators to technical and non-technical stakeholders, enhancing data-driven decision-making with clear feedback loops.

• Supported production deployments by monitoring application behavior and validating early usage signals for a cybersecurity threat intelligence platform, contributing to overall system reliability and performance.

• Applied a strong problem-solving mindset to troubleshoot and resolve data processing issues, ensuring the integrity and timeliness of threat intelligence reports for critical security operations.

Associate Software Developer, Biotech LabOps Automation | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Developed and maintained robust backend APIs using Python and RESTful principles, supporting critical lab operation workflows and integrating with external systems; ensured data consistency and system availability for a biotech platform.

• Implemented data access layers for various databases, ensuring efficient and secure data retrieval for frontend applications and internal reporting tools; improved data query performance by 25%.

• Contributed to the design and implementation of new features for a web application, collaborating with senior engineers to deliver modular and maintainable code solutions.

• Assisted in data preparation and exploratory analysis to support data science initiatives, transforming raw data into usable formats for modeling; accelerated insight generation for research teams.

• Participated in code reviews and adopted best practices for software development, improving code quality and team productivity by 10% across projects.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
