NEEL GALI

Full Stack Developer

(475)- 291- 1455 **neelgali7@gmail.com** **LinkedIn**

Summary

Full Stack Developer with 3+ years of experience architecting high-performance applications, specializing in healthcare and compliance-focused applications. Proven ability to design and implement scalable architectures, automate secure data workflows. Skilled in developing **scalable backend services, intuitive front-end interfaces**, and **CI/CD pipelines** in regulated environments.

Skills

Methodologies: SDLC, Agile (Scrum, Kanban), Waterfall
Programming Languages: Python, Ruby, Java, JavaScript, TypeScript, SQL
Frameworks & Libraries: Ruby on Rails, Spring Boot, React, Angular
Cloud & DevOps: AWS (Lambda, S3, Secrets Manager, CloudWatch, EventBridge, AWS Bedrock), Azure, Microsoft Entra, Azure AD, Terraform, Kubernetes, Docker
Database Technologies: MySQL, PostgreSQL, Oracle
Version Control & CI/CD: Git, GitHub, GitHub Actions, Jenkins
API Development: Swagger, RESTful API, GraphQL, Postman
Testing: Jest, React Testing Library, Selenium, JUnit, Mockito, RSpec
Soft Skills: Problem Solving, Time Management, Adaptability, Attention to detail, Strong Communication Skills, Team Collaboration

Education

Master of Science in Computer Science | Oklahoma State University, Oklahoma **May 2024**

Bachelor of Science in Computer Science | Jawaharlal Nehru Technological University, India **June 2021**

Work Experience

Client: Cardinal Health, New Jersey **January 2024 - Current**
Full Stack Developer
Project: *Revenue Cycle Management*

- Built and maintained secure backend services using **Java (Spring Boot)** and **Python**, enabling identity governance, access provisioning, and audit-compliant workflows across regulated applications
- Developed and integrated **OAuth2** and **JWT-based authentication flows** for secure session handling and delegated access
- Designed modular **microservices architecture** for **role mapping and entitlement verification**, deployed on **AWS ECS** with **Kubernetes**, increasing fault tolerance and horizontal scalability
- Utilized **Python based automation scripts** for internal tooling, **processing audit logs**, **generating compliance reports**, and validating user-role-policy associations
- Created frontend components in **React.js** for an **internal dashboard** allowing security analysts to **visualize access violations**, role expirations, and exception policies in real time
- Designed **database schemas** and implemented data access layers for user identity and policy data using **AWS RDS(PostgreSQL)** to store and query user roles, access policies, and audit metadata, ensuring data consistency and performance across microservices
- Strengthened **CI/CD** pipeline using **GitLab**, with built-in secret scanning, dependency checks, and automated rollback mechanisms for secure releases
- Used **metrics and dashboards** (CloudWatch, custom API logs) to **monitor service health**, uptime, and API latencies helping reduce incident MTTR

Sage Softtech, India **August 2020 - July 2022**
Client: Strateos
Full Stack Developer
Project: *R&D Cloud Automation Platform*

- Engineered **backend modules** to support real-time experiment tracking, contributing to a microservice-based architecture focused on scalability and maintainability
- Built scalable **RESTful APIs** in **Java (Spring Boot)** to manage laboratory inventory, experiment protocols, and analytical workflows, ensuring modular and maintainable backend architecture
- Implemented **reusable React UI components** focusing on dynamic form rendering, real-time experiment status tracking, and inventory management UIs.
- Integrated new features for **user roles** and permissions management in **Ruby on Rails**, using **custom Pundit policy scopes** to filter data based on user roles and enforcing Role-Based Access Control (**RBAC**).
- Enhanced test automation coverage using **Junit, Jest, React Testing Library, RSpec** and **Cypress**. Integrated CI pipelines for auto-deployment using **Jenkins, GitHub Actions** CI/CD.

Client: Monarch Tractor
Backend Developer
Project: *Employee Lifecycle & Access Management*

- Designed and developed **RESTful services** using **Spring Boot** to manage employee onboarding, role-based access control, and offboarding workflows.
- Integrated third-party APIs (**HRMS**, identity providers, email, and **IT provisioning systems**) to enable **automated user provisioning** and group assignments.
- Built **Python-based microservices** for data synchronization across internal IT systems, ensuring compliance with data retention and access policies.
- Utilized **AWS services** including **Lambda** (for asynchronous backend tasks), **S3** (for secure file handling), **Event Bridge** (for event-driven scheduling), and **CloudWatch** (for centralized logging and metrics), ensuring high availability and operational transparency.
- Implemented **CI/CD pipelines using Jenkins and Docker**, automating build, test, and deployment processes for Java and Python services, significantly reducing release cycles.
