Professional Experience

Senior Software Engineer *Jul 2025 – Present*

EPAM Systems | Cloud DBaaS Operations Platform

- Designed and deployed **Kubernetes** operators for the full lifecycle management of **DBaaS** instances on **AWS**, reducing manual intervention by 40%.
- Implemented advanced auto-scaling algorithms for distributed **microservices** using **Prometheus** and **Grafana**, optimizing cloud resource consumption by 25%.
- Developed robust **Go** applications to manage multi-cloud infrastructure across **GCP** and **Azure**, enhancing system performance by 30%.
- Executed comprehensive synthetic load tests using **JMeter** on **Kubernetes** clusters, validating performance under production conditions for 1M concurrent users.
- Collaborated with cross-functional teams to define system performance requirements, integrating new hardware components that improved data throughput by 15%.
- Monitored production runtime data with **PromQL** queries, identifying and resolving bottlenecks that increased platform stability by 20%.
- Authored technical documentation for **DBaaS** deployment and maintenance procedures, streamlining onboarding for new engineers by 35%.

Software Engineer *Jul 2022 – Jun 2025*

Globant | Multi-Cloud Infrastructure Solutions

- Developed and maintained **Python** microservices for a multi-cloud platform, ensuring high availability and data integrity across **AWS** and **GCP** environments.
- Utilized **Kubernetes** for container orchestration and application deployment, managing scaling and networking efficiently across 100+ production services.
- Designed system requirements for new software solutions, optimizing performance and scalability in cloud environments, reducing latency by 18%.
- Implemented refined auto-scaling heuristics for distributed components using **Prometheus**, improving workload management and resource utilization by 22%.
- Performed extensive debugging and deployment of software features, collaborating with teams to deliver enhancements that boosted user satisfaction by 10%.
- Contributed to the full software development lifecycle, designing robust solutions for critical systems that processed over 500GB of daily data.
- Monitored production infrastructure using **Grafana** dashboards, identifying bottlenecks and implementing optimizations that reduced cloud costs by 15%.
- Prepared detailed technical documentation for software installations and maintenance, reducing support ticket resolution time by 20% for internal users.

Software Engineer *Jul 2020 – Aug 2022*

Thoughtworks | Enterprise Application Development

- Designed and developed robust **Java** applications for an enterprise platform, enhancing system performance and user experience for 5,000 daily users.
- Participated in the full software development lifecycle, implementing new features and maintaining existing systems using **Git** for version control.
- Analyzed user requirements to design scalable software solutions, optimizing data processing workflows that reduced report generation time by 30%.
- Implemented **CI/CD** pipelines using **Jenkins** and **Docker** for automated testing and deployment, improving release frequency by 50%.
- Maintained databases and related systems within the application area, ensuring high availability and data integrity for over 1TB of sensitive data.
- Collaborated with cross-functional teams to identify and recommend system improvements, leading to a 15% increase in operational efficiency.

Skills

Languages: Go, Python, Java
Frameworks & Tools: Kubernetes, Prometheus, Grafana, PromQL, JMeter, Git, Jenkins, Docker, Microservices
Cloud & Infra: AWS, Google Cloud Platform (GCP), Microsoft Azure, DBaaS
Concepts: High Availability, Scalability, Performance Optimization, Auto-scaling, Workload Management, CI/CD, SDLC, Distributed Systems, System Design, Data Integrity

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
