Professional Experience

Senior Software Engineer *Jul 2025 – Present*

Epik Solutions | FinTech Risk & Trust Platform

- Led design and implementation of new **Ruby on Rails** backend services for fraud detection, ensuring robust, low-latency **APIs**. Mentored junior engineers on best practices, boosting team delivery velocity by 15%.
- Drove architectural decisions for integrating real-time spending insights using **Kafka** streams and **Redis** caching, enhancing member protection. Improved data processing efficiency by 20%, supporting 1M daily transactions.
- Optimized **PostgreSQL** database queries and indexes for core **Trust and Safety** platforms, reducing **API** response times. Implemented performance tuning strategies, decreasing critical query latency by 30% for key services.
- Developed comprehensive **observability practices** utilizing **Prometheus** and **Grafana** for critical backend services. Automated incident response procedures, improving system reliability by detecting anomalies 25% faster.
- Spearheaded **ML integration** capabilities within the **policy lifecycle** engine using **Python** and **FastAPI** to automate risk decisions. Achieved a 10% reduction in manual review effort while maintaining accuracy levels.
- Implemented **CI/CD pipelines** with **GitLab CI** and **Docker** for automated deployments across microservices architecture. Reduced deployment time by 40%, supporting faster iteration and experimentation initiatives.
- Designed and implemented **API Gateway** using **Kong** for secure and scalable access to backend services. Enhanced **API** security and managed traffic efficiently, handling 2M requests per minute.

Software Engineer *Jul 2022 – Jun 2025*

Samay Systems LLC | Enterprise FinTech Data Platform

- Developed and maintained **Python** and **Java** microservices for a large-scale **FinTech** data platform on **AWS**. Processed 500GB daily transaction data, ensuring high availability (99.9%).
- Engineered **REST APIs** using **Spring Boot** to expose spending insights and member data securely. Facilitated seamless data access for internal and external partners, reducing integration time by 20%.
- Designed and optimized **PostgreSQL** schemas and queries for **transactional databases**, handling millions of records efficiently. Improved data retrieval speeds by 35% for critical reporting functionalities.
- Implemented **Redis** caching strategies to enhance the performance of frequently accessed data. Decreased database load by 25%, resulting in a 15% reduction in **API** latency.
- Participated in **on-call rotation**, resolving critical production incidents within defined **SLAs**. Maintained platform reliability and performance, ensuring 99.95% uptime for core services.
- Contributed to the development of **CI/CD pipelines** using **Jenkins** and **Docker** for automated deployments. Streamlined release processes, decreasing time-to-market for new features by 20%.
- Implemented robust **security protocols** and **authentication mechanisms** for sensitive financial data. Ensured compliance with industry regulations, preventing unauthorized access by 100%.
- Refactored legacy **Java** modules into modern **Python** services, improving maintainability and scalability. Reduced technical debt by 30%, simplifying future enhancements and integrations.

Software Engineer *Jul 2020 – Aug 2022*

Zemoso Technologies | Enterprise SaaS Platform Solutions

- Developed core **Java** microservices for enterprise **SaaS** applications using **Spring Boot** framework. Implemented new features, supporting over 50,000 active users with high availability.
- Designed and implemented **RESTful APIs** for data exchange between frontend and backend systems. Improved system integration efficiency, reducing data retrieval times for clients by 20%.
- Managed and optimized **MySQL** databases, including schema design and query tuning. Enhanced database performance, accommodating 10M records and reducing report generation time by 15%.
- Wrote comprehensive unit and integration tests using **JUnit** and **Mockito** to ensure code quality. Maintained high code coverage above 85%, ensuring platform reliability and stability.
- Collaborated closely with product teams to translate requirements into technical specifications. Delivered features adhering to project timelines, ensuring 95% on-time project completion rate.
- Contributed to **CI/CD pipeline** enhancements, automating build and deployment processes. Reduced manual effort for deployments by 25%, speeding up time-to-market for software releases.

Skills

Languages: Ruby, Python, Java, SQL

Frameworks & Tools: Ruby on Rails, FastAPI, Spring Boot, Docker, GitLab CI, Jenkins, Prometheus, Grafana, Kafka, Kong, JUnit, Mockito

Cloud & Infra: AWS, Microservices, PostgreSQL, MySQL, Redis

Concepts: API Design, System Architecture, Scalability, Observability, CI/CD, Performance Tuning, Security Protocols, Policy Lifecycle, Experimentation, On-call Rotation, SaaS, FinTech, Data Modeling

Education

Master's in Computer Science, Oklahoma State University, Stillwater

Bachelor's in Computer Science, JNTU Hyderabad, India
